

M0811V2

Evergreen Chemicals Co., Ltd.

Product description

Demoulding wax M0811V2 is a special wax mixture, mainly composed of high-quality Brazilian Carnauba wax. Specially designed for the composite material industry to provide products with higher glossiness and maximum demolding times. Widely used in fields such as yachts, fishing boats, automotive accessories, rail transit, and bathroom fixtures.

Packing of products

The packaging is 311g/can and 12 cans/box.

Product Advantages

- Provide high gloss products;
- Excellent demolding performance;
- Easy to apply, wipe, and polish;
- Environmentally friendly and odorless.

Product Application

1. Before using M0811V2 super demoulding wax, the surface of the mold must be clean and clean. For old molds, they must undergo grinding, polishing, and sealing before use.
2. Use a sponge to evenly apply an appropriate amount of M0811V2 super demoulding wax on the surface of the clean mold in Circular motion until the entire mold surface is covered.
3. After operation, wait for 10 minutes for it to dry and solidify.
4. After drying, wipe the surface of the mold with a pure cotton cloth until the surface is bright and free of excess wax.
5. Using the same operation, complete at least 5 times and cure the last time for at least 30 minutes.
6. Then start production until difficulty occurs in demolding and reapply wax 1-3 times.

matters needing attention

Use in a well ventilated environment, away from heat sources and open flames. Store at room temperature to prevent freezing. Place properly when using, do not let children come into contact, avoid eye contact or swallowing.
