

Chemical/Physical Nature

ZC-189 resin is an unsaturated polyester resin with phthalic anhydride, maleic anhydride and standard glycol as the main raw materials. It has been dissolved in styrene cross-linking monomer and has medium viscosity and medium reactivity.

Benefits and Application

ZC-189 resin meets the certification requirements of China Classification Society (CCS). It has good strength and rigidity and fast post-curing. It is suitable for hand lay-up process to produce various common water-resistant products such as inland river FRP ships, automobile parts, cooling towers, water tanks, etc.
